

PROJECT

EAST WALL TOILETS

CLIENT

AUK

CONTRACT VALUE

£375K

Design and Build

OBJECTIVE

This project was the first of an AUK rolling program to upgrade amenity facilities. Consequently this scheme involved careful specification selection to ensure the facility was fit for purpose and establish a benchmark site standard.

This project was the first full project under taken by Hollingsworth Ellery. The project tested the newly developed safety systems without issue and represented a difficult project in terms of sequencing and working adjacent to live Airplane manufacturing areas.

METHOD

A formed in-situ coved resin floor is detailed around the IPS paneling system to ensure the heavily used areas can be cleaned regularly and if necessary utilise high power washers.

The sanitary-ware is fitted with infra red controls to avoid excessive waste of water and is secure to a geberit frame that integrates the plumbing installation and provide the necessary stability to withstand the large workforce that it caters for.

RESULTS

The completed project provides the ideal balance between durability and aesthetic qualities.

The resin floor coating is easy to clean yet with added micro silica beads provides excellent anti slip properties during the ongoing daily cleaning activities.

SUMMARY

The facility exceeded the clients expectation and met all the requirements of the workforce and the nominated cleaning personnel.

The project was completed without any accidents or first aid occurrences clocking up 10,000 man hours worked during the project term.

The hand over date was achieved and the final account was agreed on a weekly adjustment basis keeping AUK fully informed of all project potential as soon as information became made available.
