

PROJECT

SURFACING TO SITE ROADS

CLIENT

GM MOTORS ELLESMERE PORT

CONTRACT VALUE

£100K

OBJECTIVE

Hollingsworth Ellery was selected to carryout critical upgrades to GM Motors (Vauxhall) site infrastructure and external access roads and car parking upgrades.

Works were procured as efficiently and promptly as possible to suit the clients requirements. In some instances this required an open book approach or negotiated rates.

METHOD

The timing of the works were very dependant upon the Vauxhall shift pattern. Works were sequenced and coordinated around heavy traffic flow times and with a rolling schedule of traffic control measures. Cost effect solutions involved overlaying the existing surfacing with minimal planning, this also minimized the required programme.

RESULTS

Each package of work was completed within the allocated programme and without incident or detrimental effect on Vauxhall's operations. The end result is an improved infrastructure system which is both easier to manage and reduces maintenance.

SUMMARY

This works continues as budget funding becomes available as and when required. Work is within a busy live environment and without interruption to the plant operations and people. Hollingsworth Ellery pride themselves upon being able to react quickly and professionally in order to meet client requirements.
